The energy released during a flare is typically on

the order of 10^{27} ergs per second.

Large flares can emit up to 10^{32} ergs of energy.

ergs of energy.

Flares occur when intense magnetic fields on the Sun

become too tangled. Like a rubber band that snaps when it is twisted too far,

the tangled magnetic fields release energy when they snap

;. The energy emitted by a solar flare is more than a million times greater than

the energy from a volcanic eruption on Earth!
