Grounding transformers are typically used to: ;

Provide a relatively low-impedance path to ground, thereby maintaining th

e system neutral at or near ground potential. Limit the magnitude o

f transient overvoltages when restriking ground faults occur. Provide a source o

f ground fault current during line-to-ground faults.

NGR Sensing Resistors are attached in parallel to the Neutral

Grounding Resistor. The sensing resistor allows a protective relay w

hich detects resistor failure in a continuous manner. Sensing Resis

tors are used in combination with neutral grounding resistor monitor relays.
