Capsaicin, and related compounds known

as capsaicinoids, give chilli peppers their heat when they are eaten.

The capsaicin in chilli peppers excites pain receptors on your tongues, making

chilli taste 'hot'.

[How and why do we measure the chilli heat of food? - Campden BRI](#)

[How and why do we measure the chilli heat of food? - Campden BRI](#)

What makes chillies hot? Capsaicin is the main substance

in chilli peppers that provides the spicy heat. It binds to receptors

that detect and regulate heat (as well as being involved in the transmission) Tj T\* BT /F
