Like the Moonstone, the Poki comes 🌈 with a cloth carrying case that you can stash a USB cable in (it appears to come with a 6 🌈 USB-â MicroUSB,) or chuck your ID and credit card in and use it as a wallet while you re out. It is 🌈 actually the first thing that stood out when I was looking at the device . The Moonstone is still going strong 🌈 with a friend of mine a year later.ãThe battery delivers a 90% conversion efficiency rating according to specs on the 🌈 manufacturer s website. Most batteries go from the high 70 s to mid 80 s. You want to see a higher number as 🌈 this is how much power gets delivered with the rest being lost in conversion.ãThe Poki can charge and recharge at 🌈 2.1amps. This means you re not stuck for 20+ hours charging a 10,000mAh battery at 500mA. At 2.1 amp you should 🌈 be able to charge this in under five hours and with 90% conversion efficiency you should have around 9000mAh of 🌈 actual juice to spare. That should be enough for at least three complete charges from dead to full for any 🌈 smartphone on the market today.ã2.1 amp charging also means you re not going to spend ~7 hours charging a 3000mA phone 🌈 from dead, more like an hour and a half if your phone supports it.charging that fast.ã
